1133 Commerce Drive, Apt 112, Decatur, GA 30030
(267) 939-5375
emmac1016@gmail.com

Creative fullstack engineer with over 16 years of experience, specializing in crafting scalable and secure web applications using TypeScript, React, and AWS technologies. Demonstrates a visionary approach to software engineering by designing innovative user interfaces and architecting enterprise-level solutions. Passionate about leveraging advanced cloud services to deliver user-friendly and high-performance web solutions that drive business success.

PROFESSIONAL EXPERIENCE

AIWYN

Staff Front End Engineer

Remote

March 2025–January 2026

- Architected and led development of a highly complex NextJS application that rendered tax form PDFs as pixel-perfect HTML with real-time collaborative editing via WebSockets, enabling multiple users to simultaneously update documents with instant synchronization
- Built robust, type-safe frontend architecture using Tanstack React Query and Orval for API integration, optimizing rendering performance for complex forms with hundreds of fields through efficient memoization and re-rendering strategies
- Integrated Claude AI to enhance user workflows and streamline tax document preparation, while designing scalable component architecture supporting dozens of distinct form types with high code reusability

AMAZON.COM, LLC

Front End Engineer II

Arlington, VA

October 2024–March 2025

- Implement accessible microfrontend applications using module federation with React and TypeScript for Talent Acquisition space in People Experience and Technology organization

AMAZON WEB SERVICES (AWS)

Front End Engineer II

New Orleans, LA

June 2022–September 2024

- Architected and built a new micro frontend application that was integrated into an internal tool, using React, TypeScript, and AWS CDK for the infrastructure and deployment pipelines
- Designed UI Mockups and application flows in Figma for a greenfield project. Defined and documented the frontend infrastructure and system design. Used React, Typescript, Mock Service Worker, and TanStack React Query.

100PLUS

Senior Software Engineer

Philadelphia, PA

April 2021–June 2022

- Contribute and support NodeJs backend API and frontend portal written in AngularJS
- Built custom rate-limiting and queue system for our SMS Chat Bot which is a serverless python application using AWS SQS, Pinpoint, and Lex

COMCAST

Engineer 4, Software Dev & Engineering

Philadelphia, PA*October 2018–December 2020*

- Senior Lead on Sprint team for enterprise-level React application for Comcast Business ActiveCore SDN Platform
- UI Architect for Comcast Business My Account program and involved in the future state architecture group, transitioning the business services into bleeding edge technologies by building POCs, most prominently with CloudFormation templates deploying Lambda functions, API Gateways, IAM Roles, and SNS/SQS

RAKUTEN ADVERTISING

Lead Software Engineer

Seattle, WA*May 2018–October 2018*

- Managing 3 Software Engineers, focusing on skill development, mentorship, and career path. Leading the authentication and security effort; Working with Product Owners on requirements, Architects on system design, and my team on the implementation plan. Technologies include Hashicorp Vault integration, first party OAuth2 implementation, and Kong as an API Gateway

Seattle, WA

Senior Software Engineer

September 2016–April 2018

- Implemented high-impact, customer-facing products including a White Label Dashboard solution for our Advertisers (Customers include Birchbox, Jet, Saraiva and Dr. Axe). Involved on all aspects of this project, from backend (PHP Symfony 3) to frontend (AngularJS), including deployment (Dockerization, Jenkins, Circle CI) and testing strategies (Backend: PHPUnit, Automated Functional API tests; Frontend: Protractor, E2E Automated Tests). Other projects include creating various apps for GDPR compliance (Go microservices, Go packages, ReactJS apps).

BARK & CO

Technical Lead

New York, NY*March 2016–August 2016*

- Directly managed 2 software engineers, through a range of projects ranging from custom implementations on BarkPost.com, a WordPress site, to backend Laravel apps that support our mobile app push notifications as well as a complex migration of 2.5M email subscribers from one ESP to another. Implemented a SMS management app in Laravel that interfaces with Twilio to reach our audience and manage SMS subscriptions.

RAKUTEN ADVERTISING

Software Engineer

New York, NY*July 2013–March 2016*

- Lead and manage a team of up to 5 senior engineers, both onshore and offshore to deliver on time a complex Symfony 2 and AngularJS application that allowed our clients to build custom reports, querying vast terabytes of data. Also lead and managed a team of 3 senior engineers on a new project using Symfony 3 and AngularJS. While managing, I enforced code quality with code reviews and design discussions, as well as implementation.

New York, NY

Junior Software Engineer

July 2010–September 2013

- Fixed bugs as well as implementing new features in legacy interfaces. Involved in developing new APIs and Front End Applications, Publisher Registration Form and Custom Reporting application, with Symfony 2 Framework and Knockout.js. Worked on unit testing our new Node.js Data Mart process and created automated backend PHP scripts to backup a sharded Mongo cluster.

SKILLS

React, JavaScript, TypeScript, Node.js, Python, Amazon Web Services, Agile Methodologies, PHP, Oracle Database, MongoDB, MySQL, REST, GraphQL
